Introducing a complete Line of Quality Replacement Parts for your Blastec* Wheel

Our liner package features the new "Triple Seal" design which helps eliminate leaks at the liner seams inherent in the current BLASTEC arrangement. These leaks gone un-noticed or unattended will wear holes in your wheel housing in a very short period of time.

Complete Liner Packages

- Completely inter-changeable as a set or individual pieces
- A rib has been added around the ID for stability of the liner and additional protection against wear on the hub
- Cast abrasion resistant white iron with heat treated top and end liners
- Wheel housings available in Mild Steel, Abrasion Resistant Steel or 11-14% Manganese Steel

Standard Feed Parts

- Blades
- Impellers
- Control Cages
- Pins, Bushings Caps
- Seal Rings
- Cage Adapters
- And More ...

Complete Wheel Assemblies

- Also available are complete wheel assemblies mounted on a base plate ready to install.

The Problem

The Solution

New Hub Design

- Our new hub design eliminates the trans-torque bushing, no more cutting your motor shaft to remove the hub
- The taper lock design allows for easy removal, and the centering plate allows you to change what needs to be changed not the whole assy
